Bulletin # 5933-121410

During these cold months, the use of the ATD jumpstarts will obviously rise.

One very important thing to know about the ATD-5933, and while it is mentioned in the instruction manual, it can't be reiterated enough:

The ATD-5933 must be charged with the switch in the 12v position.

If it is not, it will not reach its full potential.

In the interest of over communicating this fact, we will be adding this notification to the front of the unit under the switch.

Thank you,
