

RIDGID

JobMax™ Drill Head R8223402

For use with the R8223400 Power Handle Only

To register your RIDGID product, please visit:
<http://register.RIDGID.com>

WARNING:

To reduce the risk of injury, user must read and understand this operator's manual as well as the operator's manual for the battery pack, charger, and power handle before use. Ensure compatibility and proper fit of head and power handle before using.

SPECIFIC SAFETY RULES

- Use clamps or another practical way to secure and support the workpiece to a stable platform. Holding the workpiece by hand or against your body leaves it unstable and may lead to loss of control.

PRODUCT SPECIFICATIONS

Chuck 3/8 in. Keyless
No Load Speed 0-550 r/min. (RPM)
Torque..... 120 in.lb.

APPLICATIONS

You may use this product for the purposes listed below:

- Drilling in all types of wood products (lumber, plywood, paneling, composition board, and hard board)
- Drilling in ceramics, plastics, fiberglass, and laminates
- Drilling in metals
- Driving screws

INSTALLING HEAD

See Figure 1.

- Remove the battery pack from the power handle.
- Place the head on the power handle and push until the latches click into position. Pull on the head to make sure it is securely installed before proceeding.

NOTE: The head can be installed at 90° angles to best suit your application needs.

KEYLESS CHUCK

See Figure 2.

The drill head has a keyless chuck to tighten or release drill bits in the chuck jaws. The arrows on the chuck indicate which direction to rotate the chuck body in order to **LOCK** (tighten) or **UNLOCK** (release) the drill bit.

WARNING:

Do not hold the chuck body with one hand and use the power of the tool to tighten the chuck jaws on the drill bit. The chuck body could slip in your hand, or your hand could slip and come in contact with the rotating drill bit. This could cause an accident resulting in serious personal injury.

INSTALLING BITS

See Figures 2 - 3.

- Remove the battery pack from the tool.
- Open or close the chuck jaws to a point where the opening is slightly larger than the bit size you intend to use. Also, raise the front of the drill slightly to keep the bit from falling out of the chuck jaws.
- Insert the drill bit.

WARNING:

Make sure to insert the drill bit straight into the chuck jaws. Do not insert the drill bit into the chuck jaws at an angle then tighten, as shown in figure 3. This could cause the drill bit to be thrown from the drill, resulting in possible serious personal injury or damage to the chuck.

- Tighten the chuck jaws securely on the bit.

NOTE: Rotate the chuck body in the direction of the arrow marked **LOCK** to close the chuck jaws. Do not use a wrench to tighten or loosen the chuck jaws.

REMOVING BITS

See Figure 2.

- Remove the battery pack from the tool.
- Open the chuck jaws.

NOTE: Rotate the chuck body in the direction of the arrow marked **UNLOCK** to open the chuck jaws. Do not use a wrench to tighten or loosen the chuck jaws.

- Remove the drill bit.

DRILLING

See Figure 4.

- Check the direction of rotation selector for the correct setting (forward or reverse).
- Secure the material to be drilled in a vise or with clamps to keep it from turning as the drill bit rotates.
- Hold the drill firmly and place the bit at the point to be drilled.
- Depress the switch trigger to start the drill.
- Move the drill bit into the workpiece, applying only enough pressure to keep the bit cutting. Do not force the drill or apply side pressure to elongate a hole. Let the tool do the work.

WARNING:

Be prepared for binding at bit breakthrough. When these situations occur, drill has a tendency to grab and kick opposite to the direction of rotation and could cause loss of control when breaking through material. If not prepared, this loss of control can result in possible serious injury.

- When drilling hard, smooth surfaces, use a center punch to mark the desired hole location. This will prevent the drill bit from slipping off-center as the hole is started.

- When drilling metals, use a light oil on the drill bit to keep it from overheating. The oil will prolong the life of the bit and increase the drilling action.

- If the bit jams in the workpiece or if the drill stalls, stop the tool immediately. Remove the bit from the workpiece and determine the reason for jamming.

NOTE: This tool has an electric brake. When the switch trigger is released, the chuck stops turning. When the brake is functioning properly, sparks will be visible through the vent slots on the housing. This is normal and is the action of the brake.

WOOD DRILLING

For maximum performance, use high speed steel bits for wood drilling.

- Begin drilling at a very low speed to prevent the bit from slipping off the starting point. Increase the speed as the drill bit bites into the material.

- When drilling through holes, place a block of wood behind the workpiece to prevent ragged or splintered edges on the back side of the hole.

METAL DRILLING

For maximum performance, use high speed steel bits for metal or steel drilling.

- Begin drilling at a very low speed to prevent the bit from slipping off the starting point.

- Maintain a speed and pressure which allows cutting without overheating the bit. Applying too much pressure will:

- Overheat the drill;
- Wear the bearings;
- Bend or burn bits; and
- Produce off-center or irregular-shaped holes.

- When drilling large holes in metal, start with a small bit, then finish with a larger bit. Also, lubricate the bit with oil to improve drilling action and increase bit life.

FRANÇAIS

Tête de perceuse JobMax™

R8223402

Utiliser uniquement avec la poignée motorisée R8223400

AVERTISSEMENT :

Pour réduire les risques de blessure, l'utilisateur doit lire et comprendre le présent manuel d'utilisation ainsi que le manuel d'utilisation du bloc-piles, du chargeur et de la poignée motorisée avant de les utiliser. S'assurer que la tête et la poignée motorisée sont compatibles et qu'elles sont installées de la façon appropriée avant de les utiliser.

RÈGLES DE SÉCURITÉ PARTICULIÈRES

- Utiliser des serre-joints ou un autre système approprié pour maintenir fermement la pièce sur une surface stable. Une pièce tenue à la main ou contre son corps est instable et peut causer une perte de contrôle.

FICHE TECHNIQUE

Mandrin 10 mm (3/8 po), sans clé
Vitesse à vide 0-550 r/min (RPM)
Couple 120 po-lb (13,56 Nm)

APPLICATIONS

Ce produit peut être utilisé pour les applications cidessous:

- Perçage de produits du bois (bois d'oeuvre, contreplaqué, lambris, aggloméré et bois dur)
- Perçage de la céramique, du plastique, de la fibre de verre et des matériaux laminés
- Perçage des métaux mous et durs
- Vissage de vis

INSTALLATION DE LA TÊTE

Voir la figure 1.

- Retirer le bloc-piles de la poignée motorisée.

- Placer la tête sur la poignée motorisée et appuyer jusqu'à ce que les loquets s'enclenchent en place. Tirer sur la tête pour s'assurer qu'elle est fixée solidement avant de commencer l'opération.

NOTE : La tête peut être installée à des angles de 90° afin de s'adapter à l'application visée.
