

# Revolutionary yel-Low Safety Dolly

...we didn't reinvent the wheel - just the dolly.

## Work Faster, Easier, Safer!

Reduce lifting injuries!

Let the  
yel-Low Dolly  
do the  
work for you!

**Faster.** You can carry more stuff with one dolly. You can carry a mattress and a box spring, a full desk or sofa or just about anything in between. In many cases you can save trips by loading multiple pieces.

**Easier.** First, it is about an inch lower than standard 4" caster floor dollies making it much easier to load. Second, when moving a load, you are not pushing on the load itself which could slide off over thick carpet or a door way threshold. You are pushing or pulling on the posts. Next, you can also use the posts to position the dolly or for leverage when loading the dolly. In addition, when unloaded and making a return trip, you don't have to pick up and carry the dolly, you just push on the posts to go back to your origin.

**Safer.** The multiple post positions allow for a load to be more securely supported while transporting. There is no shifting of a load or slipping of the user while enroute. The lower profile allows a load to be loaded more safely and easily because the load is not lifted as high. (An 80" big screen TV can be easily loaded by one person.)

1000 lb. capacity!

- All steel construction
- Powder coated finish
- Unibody frame
- 1.25" square steel posts
- Easy to maneuver
- Patent pending

Interchangeable posts can be used vertically and horizontally at the same time for added stability of large items. Tie down straps can be used to stabilize a load if needed.
